Sarah Harrington

Upsie

Senior Full Stack Software Engineer   May 2022 - Present

- Used TypesScript with Ember front end applications and Node monolith API
- Wrote acceptance, integration, and unit tests for Ember using QUnit and Jest for Node API
- Designed and implemented new UIs for internal and e-commerce applications utilizing Adobe XD for mock-ups to simplify user experience
- Developed a user friendly promo code lookup tool for internal customer service team to improve efficiency resolving customer inquiries
- Integrated payment method storage system for subscription plans using Stripe and existing payment processing allowing customers to self service payment updates
- Implemented customized Strapi add on to automate the creation of SEO friendly robots.txt file
- Successfully migrated content from Wordpress to Strapi platform, established architecture for blog posts and trained content editing team on its usage
- Created an Ember add-on that facilitated the use of common components across both all applications ensuring UI consistency

Tech Stack: TypeScript, Ember, Node, PostgreSQL, Jest, Qunit, Stripe

GovDocs

Full Stack Software Engineer II   May 2021 - May 2022

- Created and updated AWS Lambda (Node.js) functions for microservice event driven back end architecture including making updates to API Gateway and CloudFront
- Completed front end feature requests and debugging using React for customer and internal facing applications
- TDD using Jest for front and back end testing
- Became SME on integration scripts between Netsuite and back end architecture, created documentation and process workflows
- Streamlined CI/CD workflows in CircleCI by integrating orbs, variables, and caching to reduce build times
- Other AWS services used: SQS, SNS, SES, S3, CloudWatch, IAM, Cognito, API Gateway, CloudFront

Tech Stack: React, AWS, MongoDB, CircleCI, Agile, Jest

3M

Marketing Automation Developer   (Contract to Hire)   July 2020 - May 2021
